

## Celebrating 10 Years of Success

**E**arthmover Tyre Solutions Limited celebrated their 10<sup>th</sup> year of operations in 2017 and have no intention of stopping there. Founded by Jason Farr in 2006, Earthmover are family owned and run with 3 family members managing operations. Close-knit relationships within the Company are reflected in the way they engage clients resulting in repeat business encouraged by the strong professional relationships they form.

### What makes them different?

**Tried and Tested** - EMTS have established a robust supply chain assuring resilience and a responsive service. Earthmover know clients must minimise downtime on their machines and only work with the most reliable suppliers in responding to need.

Earthmover have invested significantly to support growth ensuring a continuous high-quality service and delivery, operating two tyre curing autoclaves, Solid tyre Fill, and one of the largest tyre pressing machines in the UK. The recent acquisition of a tyre re-cutting machine, means they can provide a complete in-house service, ensuring minimum downtime, and enabling clients to get the maximum service life from tyre investment.

**Investment in technology** - Earthmover have invested significantly to support growth ensuring a continuous high-quality service and delivery, operating two tyre curing autoclaves, Solid tyre Fill, and one of the largest tyre pressing machines in the

UK. The recent acquisition of a tyre re-cutting machine, means they can provide a complete in-house service, ensuring minimum downtime, and enabling clients to get the maximum service life from tyre investment.

**Health & Safety** - Earthmover are industry leaders in Health & Safety. To support the extensive and ongoing training and development, Earthmover have designed and commissioned their own tyre safety cages to protect the workforce when repairing split rim tyres on the wheel.

## Tyre Boss.... OTR Tyres on Demand

**T**yre Boss is a premier tyre trader; sourcing and supplying tyres for the construction, earthmover and industrial markets. We are the first point of contact for tyre dealers, machine dealers and machine users, we can supply both standard and specialised tyres for machines and we capable of undertaking conversions. As well as supplying budget and premium OTR tyres we also have access to a cushion solids range which can be used in highly specialised industries such as waste recycling.

Tyre Boss has a great network of contacts in the UK and Europe and can source tyres to desired specification and deliver efficiently to customers via its distribution arrangement with a large logistics company.

As the market becomes more competitive, machine and operating costs increase due to currency, cost of spare parts, salaries, and numerous other factors there is a new requirement to select the correct tyre for each machine in order to provide maximum tyre value for money. Tyre Boss specialise in selecting the correct tyre for the application for example Cushion solids for a waste transfer station providing maximum value for money and no downtime, Heavy duty mine tyres for underground mines on harsh ground materials or

## T&C Site Services T&C

**T**&C Site Services are the largest independent earthmover and OTR tyre specialist and service provider in the UK.

“Being independent means we are guided by customers’ needs; offering the best tyre for the job. All requirements such as: machine, application, site conditions and budget; are taken into account because the correct tyre for the job will mean longer tyre life, greater fuel efficiency, better machine performance and a reduction in maintenance for our customers,” said Director, Mike Leedham.

T&C offer comprehensive tyre services and management packages nationwide. Good tyre management prolongs tyre life, reduces tyre related downtime, increases production and reduces overall running costs. Well managed tyres and good casings that can be remoulded, often more than once, negate the need for new tyre purchases, defer disposal costs and minimise environmental impact.

Lifting work and tyre fitting can also be organised when machines have scheduled downtime. High quality vulcanised repairs are carried out at their Stoke-on-Trent workshop and present a cost effective alternative to replacement tyres.
